

FASTRACK FOR TEAMCENTER

Achieve vastly superior performance, reliability and cost savings of 15% to 35% with CSC's PLM hosting solution.

SPEED TO MARKET

Rapid deployment means your PLM system will be ready when you need it.

COST SAVINGS

Avoid up-front outlay of your scarce investment funds. Bundle all required hardware and operational services into a simple, predictable monthly fee.

PRODUCTIVITY

CSC proactively monitors, detects and flags potential system problems, avoiding outages that affect your business.

SCALABILITY

Multiple configurations are available, with scalability to more than 1,000 PLM seats to meet business demand.

SECURITY

Your data assets and IP remain secure across the physical, system and application security layers.

PLM LEADERSHIP

A jointly developed cloud-enabled hosting platform for Teamcenter, the world's most widely used PLM solution, backed by Siemens PLM leadership and expertise.

Are you deploying Siemens PLM Software's Teamcenter for the first time or doing a major Teamcenter upgrade?

Do you need to extend your Teamcenter environment to remote sites, or to your design partners and suppliers?

Do you need to do this quickly, without having to worry about hardware architecture, capital outlays and installation?

Then you need CSC's FASTRack™ for Teamcenter® to increase your productivity and bring profitable new products to market faster than your competition can.

Global Companies Rely on Teamcenter Software for Product Lifecycle Management

The product development marketplace has been transformed from a vertically integrated business model to one built upon global partner networks and collaborative engineering environments.

Companies must be able to share design data and requirements across multiple sites, and with suppliers and partners on a global basis. Ineffective collaboration causes schedule delays, missed milestones and quality issues. Meeting these challenges requires Teamcenter from Siemens PLM Software, along with robust IT infrastructure services, to quickly deploy your PLM environments and operate them at high levels of availability and security anywhere in the world.

CSC's FASTRack is an innovative, turnkey, PLM private cloud hosting solution which, along with Teamcenter, improves individual and team productivity through proven digital lifecycle management capabilities.

In today's challenging marketplace, FASTRack for Teamcenter:

- Limits your up-front capital expenditure and lowers your total cost of ownership in your cost-constrained program environment
- Minimizes the time and effort required for hardware selection, procurement, installation and support, especially during the time-critical startup phase of your program
- Enables your design team and partners to share complex product data in a secure and trusted environment, without the worries of compromising your valuable IP

The stakes couldn't be higher when it comes to mastering the demands of bringing new products to market. Shortening design-to-production cycles fosters innovation, sharpens your competitive advantage, improves profitability and increases shareholder value.

About CSC

CSC is a global leader in next-generation IT services and solutions. The company's mission is to enable superior returns on our clients' technology investments through best-in-class industry solutions, domain expertise and global scale. For more information, visit us at www.csc.com.

If you are using or considering Teamcenter from Siemens PLM Software to improve the productivity of your engineering teams, then learn more about FASTRack.

Turnkey PLM Hosting Platform

CSC's FASTRack for Teamcenter is a turnkey product lifecycle management (PLM) hosting platform for Teamcenter. FASTRack provides standard, scalable hardware configurations built with IBM's cloud-enabled technology, offers various storage options, and comes bundled with CSC infrastructure and application services and support to deliver measurable business benefits:

- Cost reduction of 15% to 35% on IT infrastructure, application and support services
- Improved speed to market with rapid infrastructure deployment
- Flexibility to scale up or down, aligning your PLM capacity to changes in your business requirements
- Continuous remote monitoring with 24x7 support

Whether you plan to implement Teamcenter as a stand-alone system or in a collaborative multisite environment, FASTRack for Teamcenter will improve your engineering workforce productivity and lower your operational costs.

Rapid Implementation

In a stand-alone deployment, a single instance of Teamcenter quickly provides remote access to one or more of your existing offices or design partner locations. In a collaborative, multisite deployment, two or more instances of Teamcenter can be rapidly installed to enable collaboration between your firm's geographically dispersed sites or with other partners in your supply chain.

For More Information on FASTRack for Teamcenter

CSC delivers FASTRack as a fully managed service, working with Siemens PLM Software to integrate, configure and deploy the complete solution. Learn more about how you can benefit from FASTRack at csc.com/fastrack or contact us at manufacturing@csc.com.
