Standard vehicle model

No collision

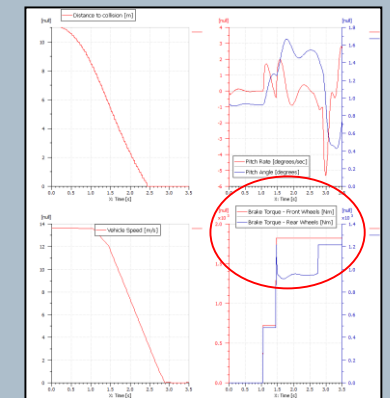

Amesim detailed chassis models

Collision

- Replacing basic chassis models by high fidelity Amesim suspension and braking system models
- Results are drastically impacted

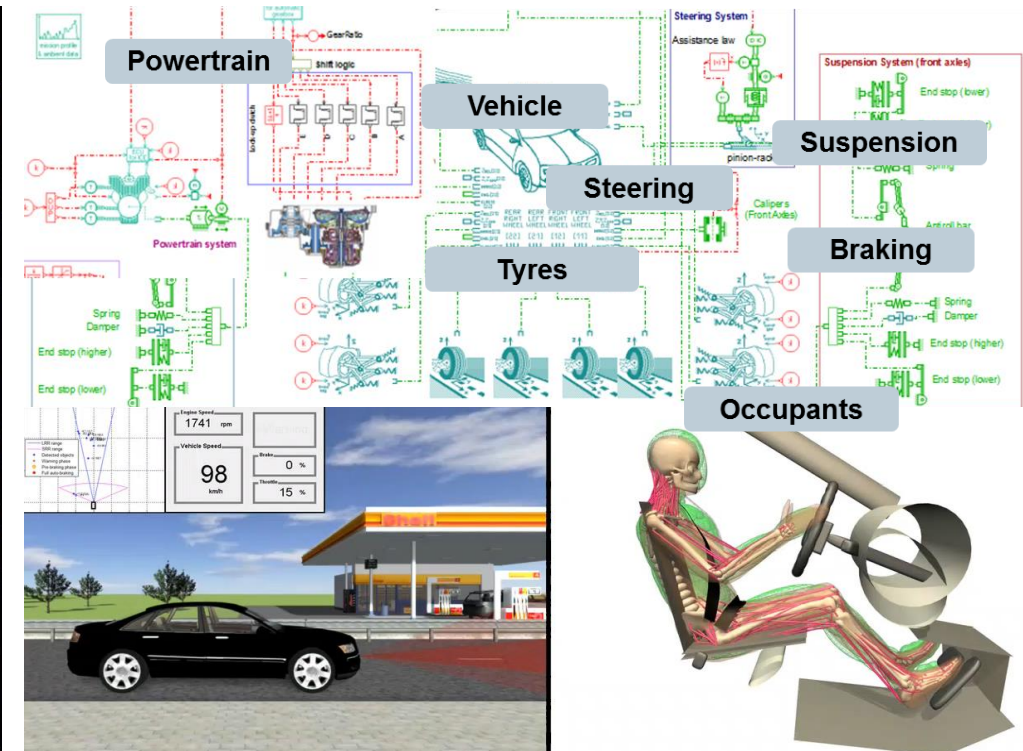

- AMESim plots show rear wheel slip and hence the ABS limits braking torque on the rear wheels
- Redesign of the controls solve the safety critical issue

# Virtual commissioning of processes

## HIL - Example on a oil & gas pumping station

### Objective:

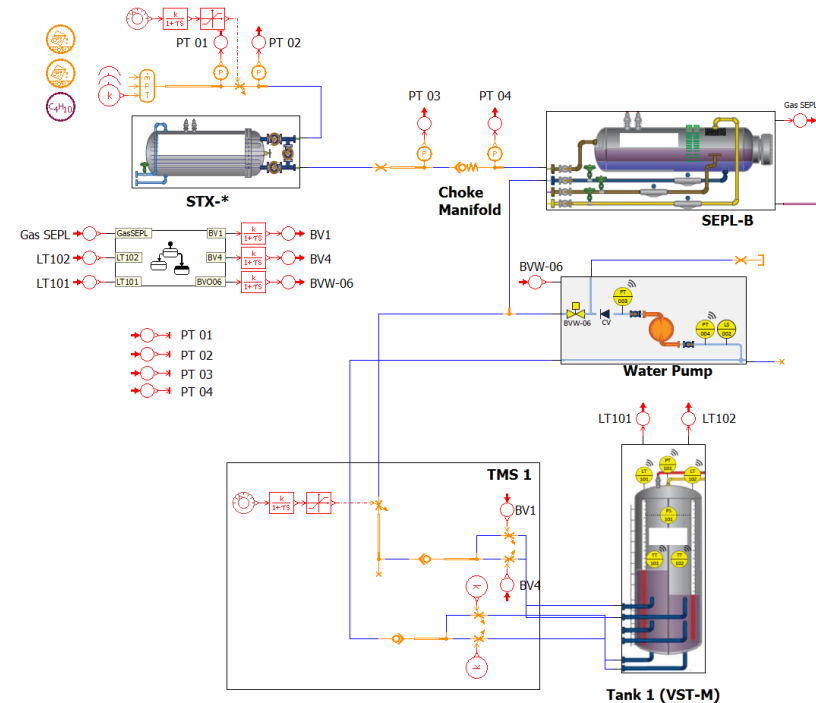

- Virtual validation of automation code of a oil & gas pumping and fluid separation systems

### Setup for hardware-in-the-loop simulation:

- Exchange of data between PLC (Siemens SIMATIC S7-1500) and LMS Amesim model
- Connection through OPC UA

### Simulation model requirement:

- Ability to precisely estimate flow, pressures, volume of fluid into reservoirs, in function of the fluid properties
- Ability to simulate a mixture of liquid and gas

# Virtual commissioning of processes

## HIL - Example on a oil & gas pumping station

### Creation of an interactive GUI:

- Ability to open/close valves, switch on/of pumps and compressors, so as to be able to simulate various working conditions
- Monitor flows, pressures, temperatures and level of fluid in the tanks
- Be able to test failure modes

# Siemens Marine

## Monitoring ship energy efficiency

- **Good predictability of the system's behavior under changing ambient conditions**
- **Helped on-board personnel in their decisions and operations in an efficient way**

### Optimize a waste heat recovery system

**Multi-domain system modeling**

**Keep system performance under control**

- Simulate the real world and achieve better efficiency
- Leverage Engineering Services to deploy a usable solution to control performance

**“Simcenter Amesim and Engineering Services enabled us to provide our customers a system which can simulate the real world in a perfect way. We wouldn't have been able to do this with other solutions.”**

Kay Tigges, Siemens Marine
