

Polarion 21 Roadmap

The published roadmap is **NOT A COMMITMENT FOR DELIVERY** but rather a forward looking view to communicate the product directions and plans

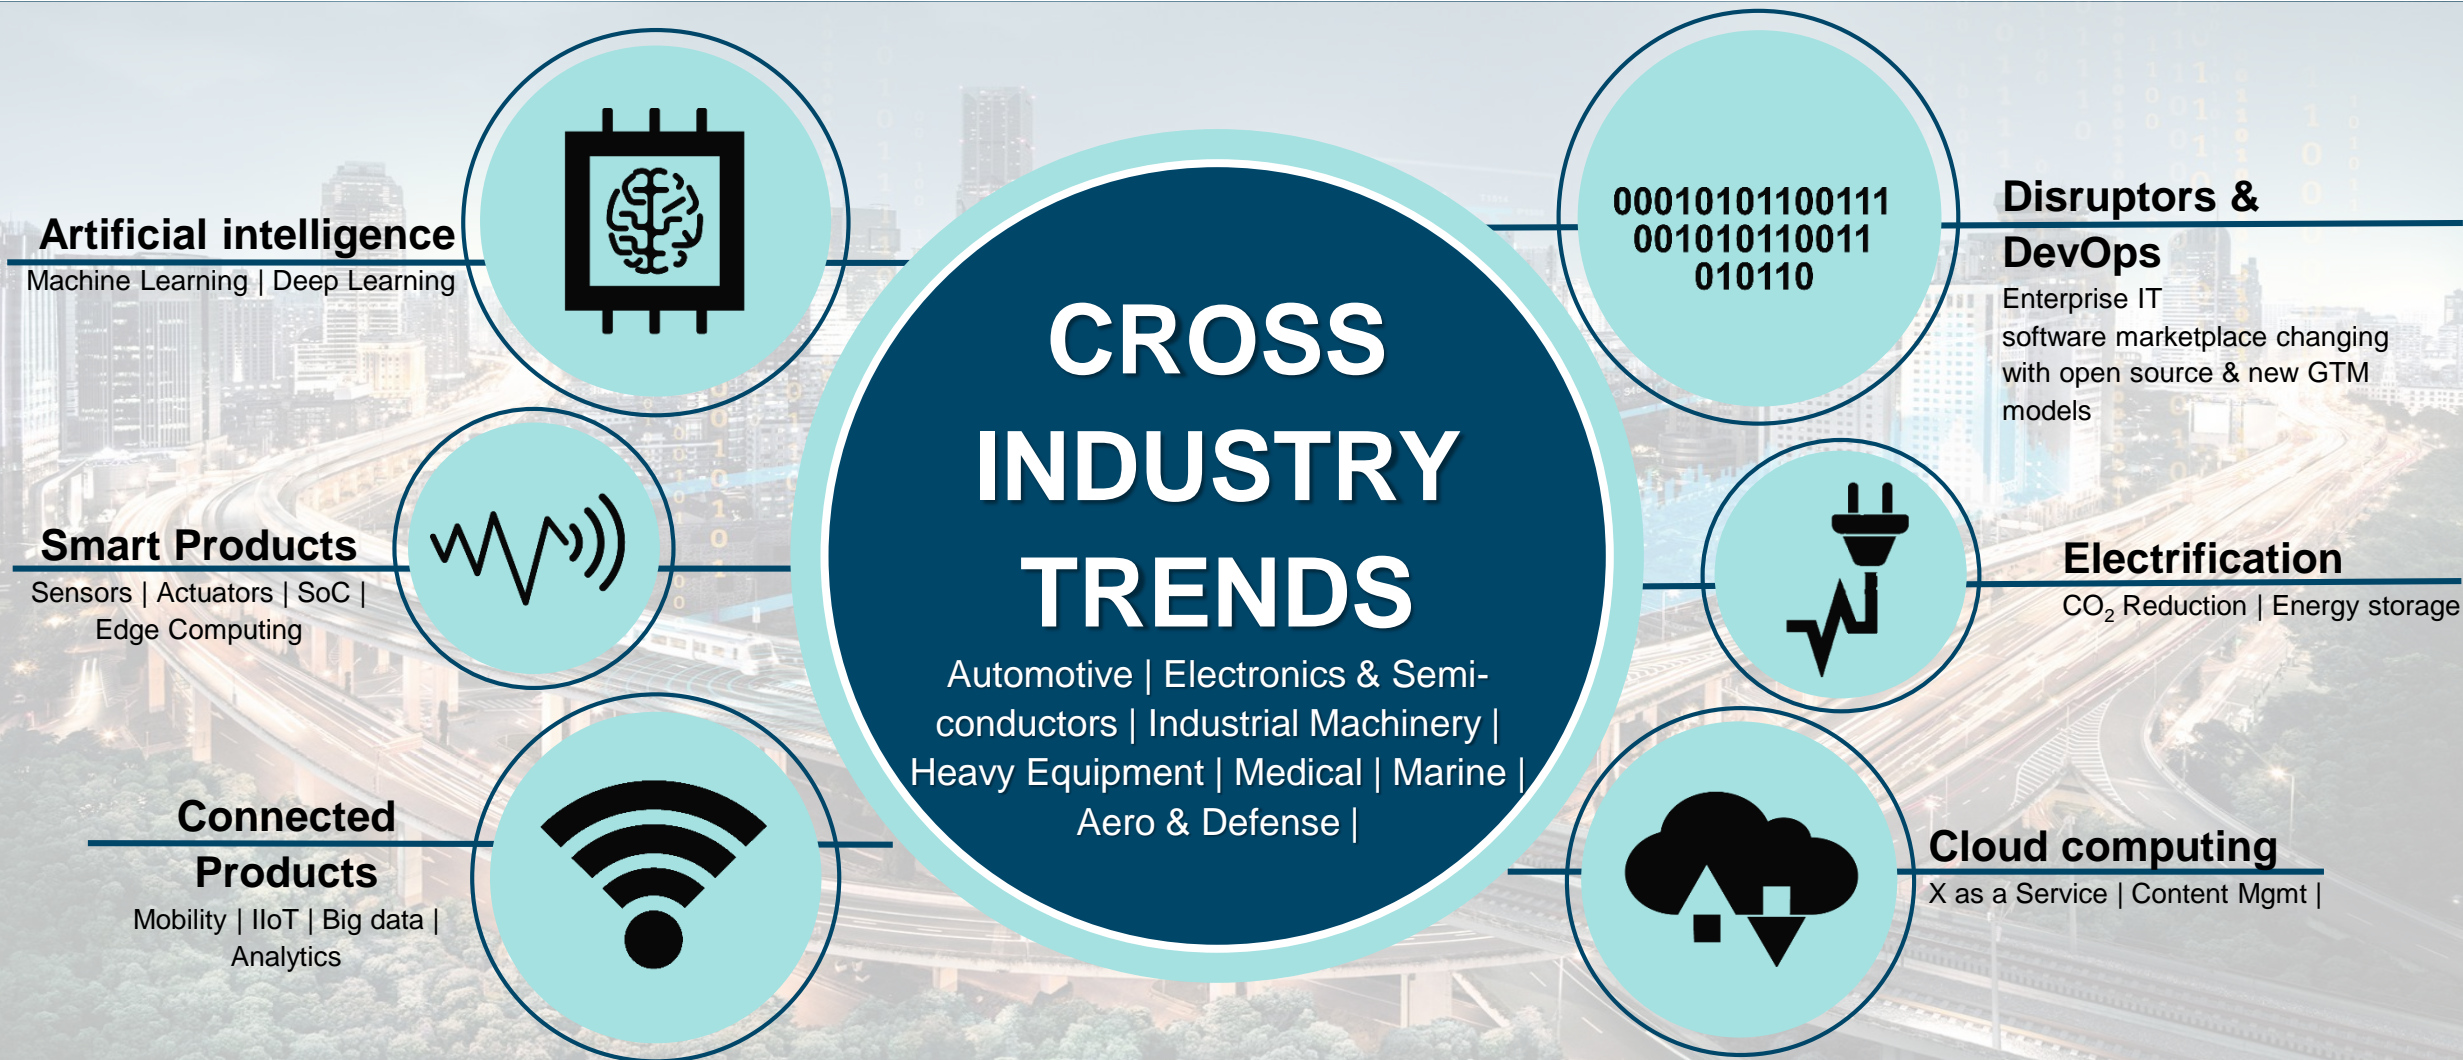

- The products organization reserves the **right to adjust the roadmap** at any time and in any way
 - as refinements to the requirements and costs are better understood
 - to accommodate changing priorities, technologies, and commitments
- When a customer requires a commitment for a future deliverable, there is a formal **commitment request process**
 - This process requires that a specification is agreed upon between the requesting party and the products organization along with an approval process that considers the assesses the risk of making the commitment to the overall plans and roadmap
- This document is intended to provide a broad and hi-level overview of the key solutions and themes for upcoming Polarion releases. It is NOT intended to be a replacement for the Release Notes or detailed enhancements in various releases of Polarion.

What is ALM

Software moving to center stage for Product development

SIEMENS

Ingenuity for life

What is ALM

Software lifecycle for cyber-physical systems

Polarion ALM helps you to **Define, Deliver, Verify** and **Maintain** any software solution interacting with **physical hardware**

Software characteristics

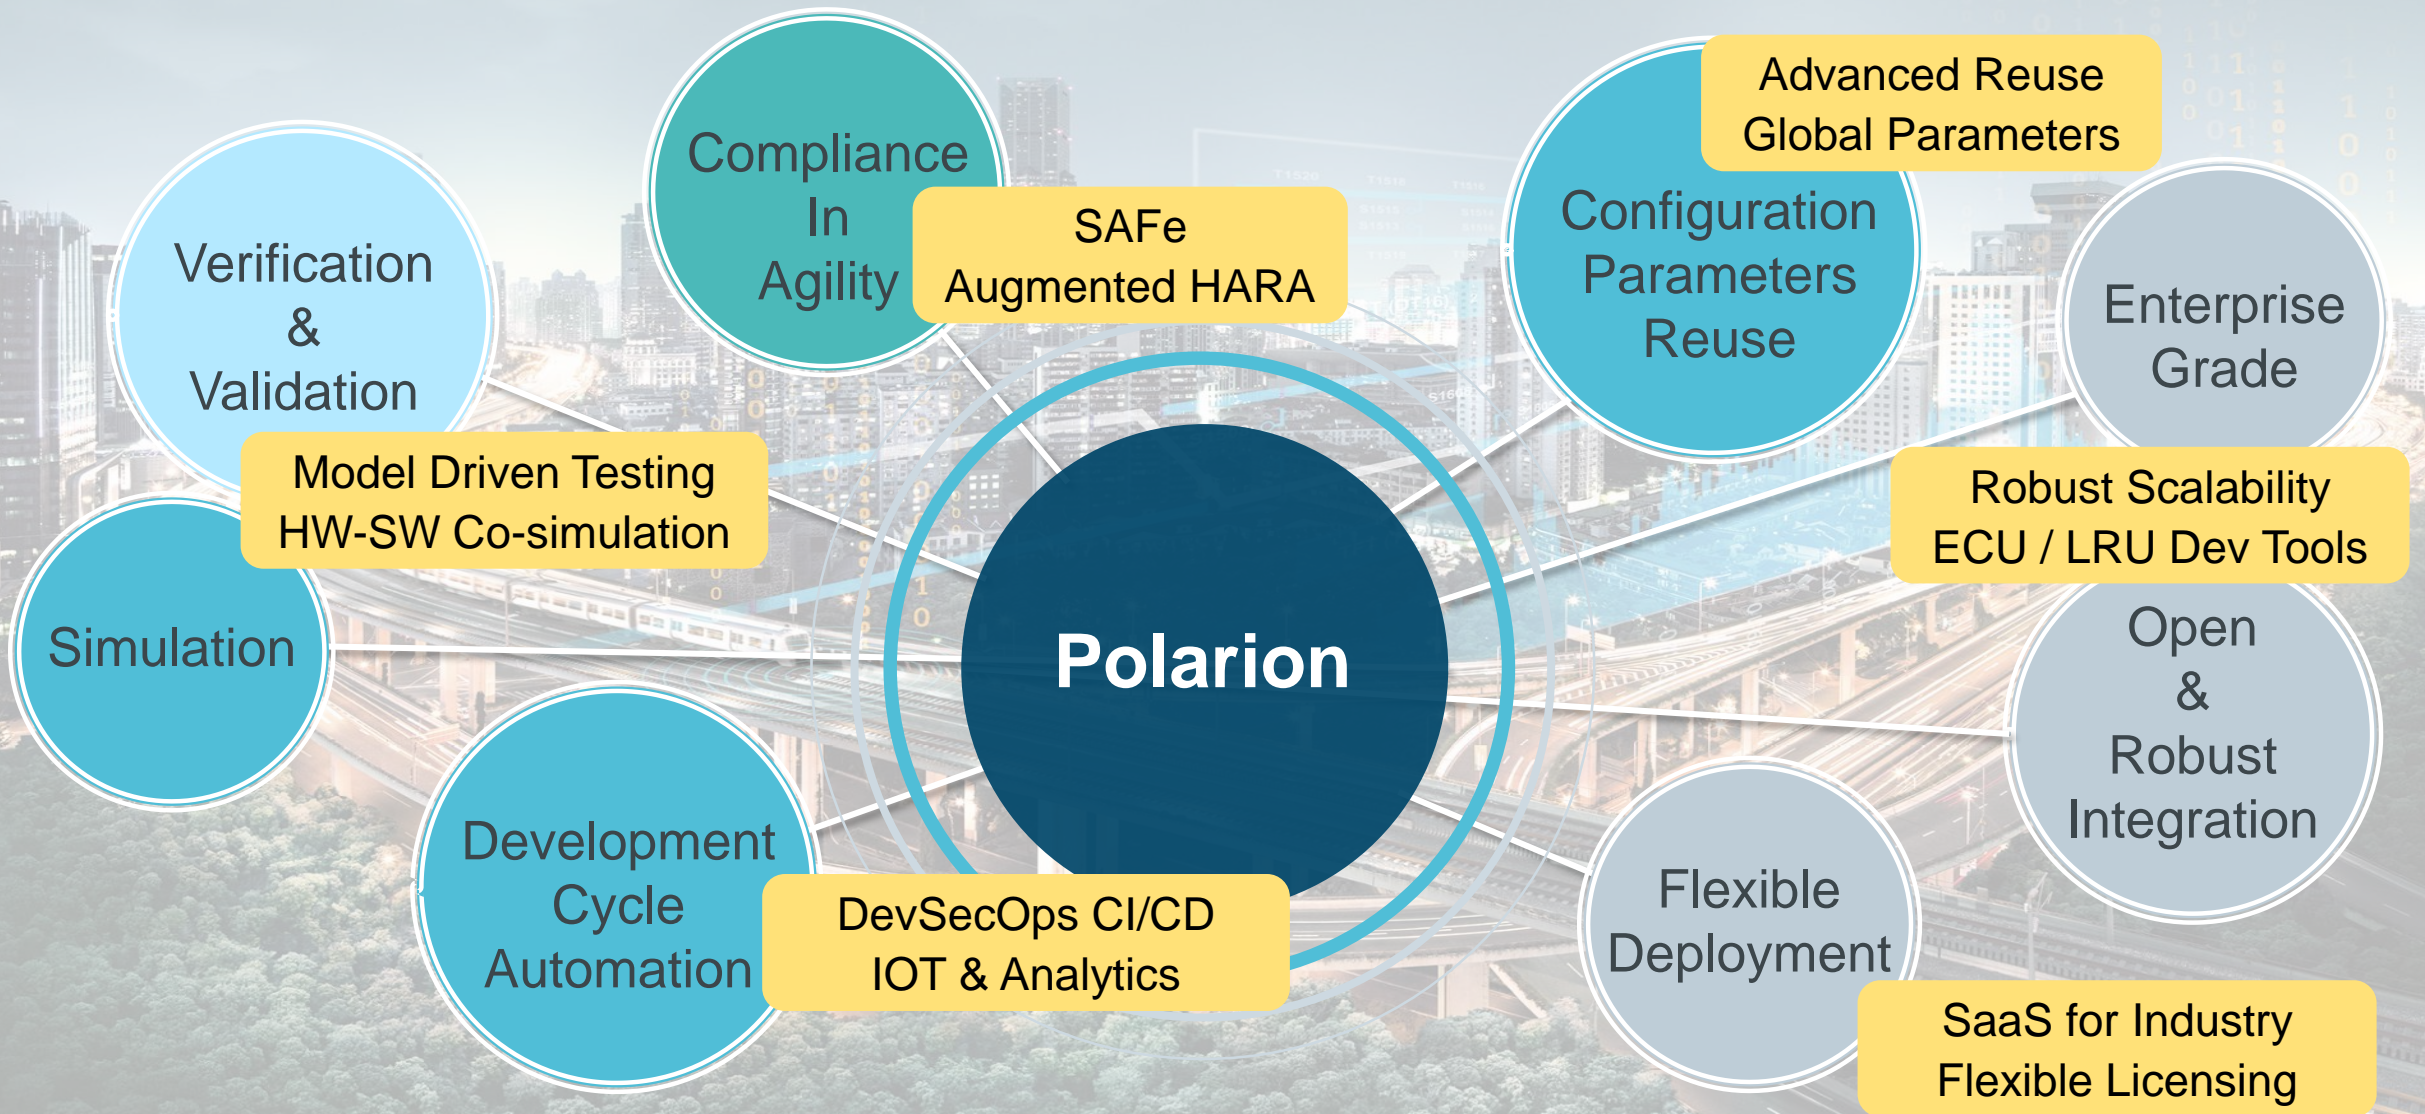

- Agile
- Complex & Integrated
- DevOps Built
- Safety-critical
- Verified & Validated

Polarion solutions

- Out-of-box SAFe Support
- Advanced Reuse
- Integrated DevOps Pipeline
- Traceability and Auditing
- Verification Automation

Longer Term Vision Goals

2019 - 2022

Polarion 21 Release Schedule

Polarion Release Schedule

- Polarion 19.3 December 2019
- Polarion 20 R1 April 2020
- Polarion 20 R2 October 2020
- Polarion 21 R1 April 2021

- *Two major feature releases every year*
- *Cummulative patches for latest major release up to monthly cadence*
- *Early Access Programme allows the customers to try new features*

Polarion 20

Major Roadmap Themes

DevOps

Orchestrating CI/CD tools

Advanced reuse

LiveDoc baselines
Baseline collections

Enterprise boost

We keep it fast, while your data grow exponentially

Cloud

Cloud-friendly Polarion

DevOps

Polarion 20 R1 – Jenkins Integration

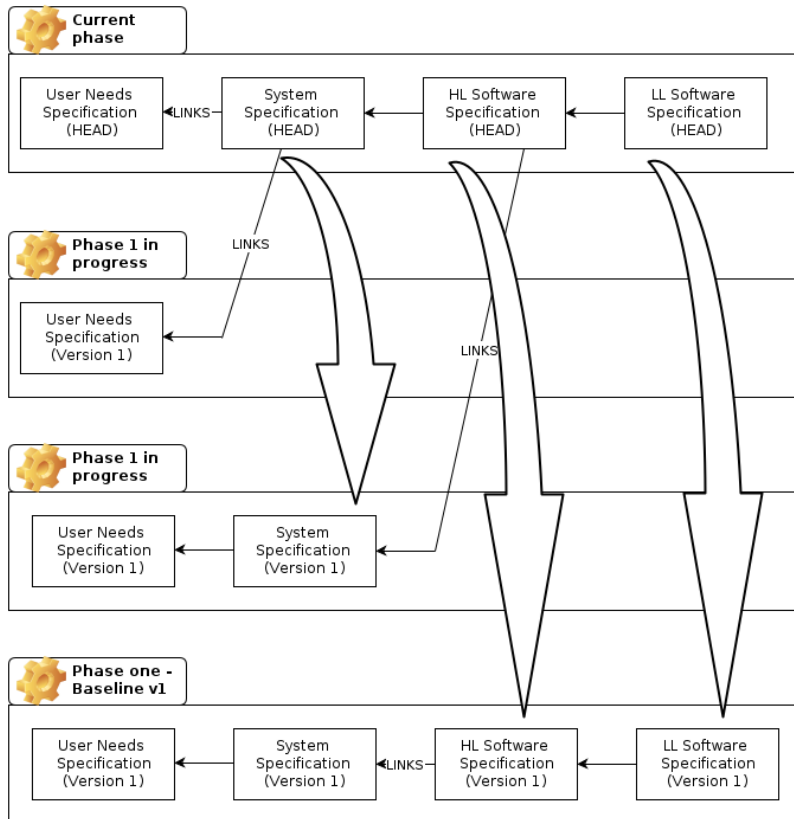

Accelerate innovation through continuous delivery

- Seamless integration with continuous integration tools
- Enable the ALM traceability into pipelines and build results by tight integration to Jenkins CI
- Provide robust infrastructure and APIs to integrate with other CI tools

Advanced Reuse

Polarion 20 R1 – Baseline Collections

Simplify managing and reusing of complete project definition

- Collect set of specifications is specific versions that are relevant for a project for easy and consistent scope definition
- Simplify parallel development of different product versions through collection-specific views and traceability
- Identify and propagate changes easily between different baseline collections consistently throughout the whole set of documents

Enterprise Boost

Polarion 20 R1– Large Data

We keep it fast, while your data grow exponentially

- Faster LiveDoc compare on big documents
- Improved scalability of Polarion cluster
- Reduced memory consumption to ensure consistent performance for high number of concurrent users
- Faster and more scalable historical search and baseline operations
- Query limiting to prevent users from overloading server by excessive requests
- Speed-up the indexing of history data to limit system load
- Speed-up reindex to limit downtime during upgrades or crashes
- Asynchronous execution of custom form extensions for faster access of Polarion data

Enterprise Boost

Polarion 20 R1 – Enterprise Administration

Simplify management of access rights and permissions by introducing user groups

- Group users according to their business role to ensure consistent level of access
- Automatically import group membership from LDAP for new users as they login for the first time
- Manage all group assignments for a user in a single source of truth that is common for all company's systems

Cloud

Polarion 20 R1 - Cloud-ready

Strengthen security to SaaS industry standards

- Cross-site request forgery protection
- Digitally signed SAML single sign-on requests
- Independent 3rd party penetration test and SOC2 certification

Automated deployment through containers

- Fully automated installation and update of Polarion via Kubernetes cluster and Dockers

New Polarion trial

- Redesigned trial experience for evaluation teams

Enhancements

Polarion 20 R1

User Experience Improvements

- Multi-select support for Live Report parameters
- Multi-select support for Work Items table configuration
- Export of Work Item selection from table view
- Display changes in string fields as diff
- Re-order enumerations by drag & drop

Popular Enhancements

- Configurable default for MyPolarion personal dashboard

Integrations

Polarion 20 R1- Core Integrations

TFS Connector Enhancements

- Support synchronizing hyperlinks between TFS and Polarion
- Automatically create hyperlink to TFS for synchronized items

Jira Connector

- Two-factor authentication via mutual TLS authentication

Windchill and Enovia Integrations

- Traceability and process orchestration with additional PLM tools

Polarion 21

Major Roadmap Themes

DevOps

Orchestrating VCM
repositories

Advanced reuse

Occurrence level metadata

Enterprise boost

We keep it fast, while your
data grow exponentially

UI/UX

Easy on the end users

Orchestrate the lifecycle and configuration of external repositories

- Native traceability to git repositories in GitLab and BitBucket
- Reduce administration overhead for external repository management by unifying user management
- Easily setup Git, GitLab, GitHub, BitBucket or Subversion source code repositories when creating a new Polarion project
- Seamlessly integrate with any other 3rd party repository by easy to use API

Advanced Reuse

Polarion 21 R1 – Occurrences with context-specific metadata

Reuse content while maintaining easy traceability by adding context-specific metadata

- Reuse requirements and test case content from library and add metadata that is specific to a product or project for easy traceability
- Easily trace and find all requirements in context of your project, both project-specific and reused from master
- Create context-specific trancelinks between reused and newly added requirements
- Unify Derived and Branched document concepts to provide one easy and robust reuse solution

Enterprise Boost

Polarion 21 R1– Enterprise Reliability and Scalability

We keep it fast, while your data grow exponentially

- Natively scalable and cluster-wide indexing service with enhanced scalability, reliability and reduced HW footprint
- Cluster-wide database service with reduced HW footprint
- Easy backup and recovery of Polarion indexes to minimize downtime

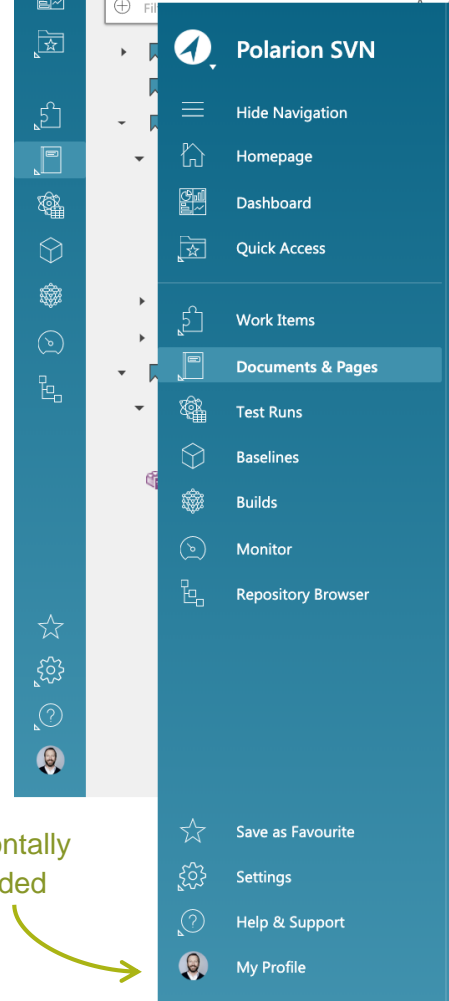

Enterprise-ready licensing

- Support flexible licensing models with combinations of perpetual and term licenses
- License usage monitoring aligned with industry standard

Integrations

Polarion 21 R1- Core Integrations

ReqIF Import Enhancements

- Auto-mapping of synchronized fields for quick and easy import configuration
- Improve compatibility with IBM DOORS

DOORS Connector

- Auto-mapping of synchronized fields for straightforward configuration

Polarion 21+

Roadmap Theme Candidates

Advanced reuse

Requirements parametrization

Embedded

Model-based software requirements and design

Collaboration

Seamless collaboration on LiveDocs

Quality

Early verification of requirements via simulation

Integrations

CI/CD, Testing, Modelling

Thank You
