

Compatibility of Teamcenter and Active Workspace versions

See [SFB-TEAMCENTER-8014685](#)

The combinations below of **Teamcenter** and **Active Workspace versions** are **compatible** with each other. The expectation is that **Teamcenter** deployments will upgrade **Active Workspace** more frequently than the base **Teamcenter** platform release.

To leverage all of the latest features added in the **Teamcenter** platform release, choose the full featured **version** combination.

Active Workspace supports a minimum **version** of the **Teamcenter** platform and later **Teamcenter versions up to** the release that corresponds to the **Active Workspace version** that releases roughly at the same time, and all patch releases represented by the "x" in the notation, e.g. **Teamcenter** 11.6.0.1 and 12.1.0.1.

Full releases of **Teamcenter** after the release of an **Active Workspace version** are **not** supported, e.g. **Teamcenter** 12.3 on **Active Workspace** 4.2.
