

# The environmental compliance challenge

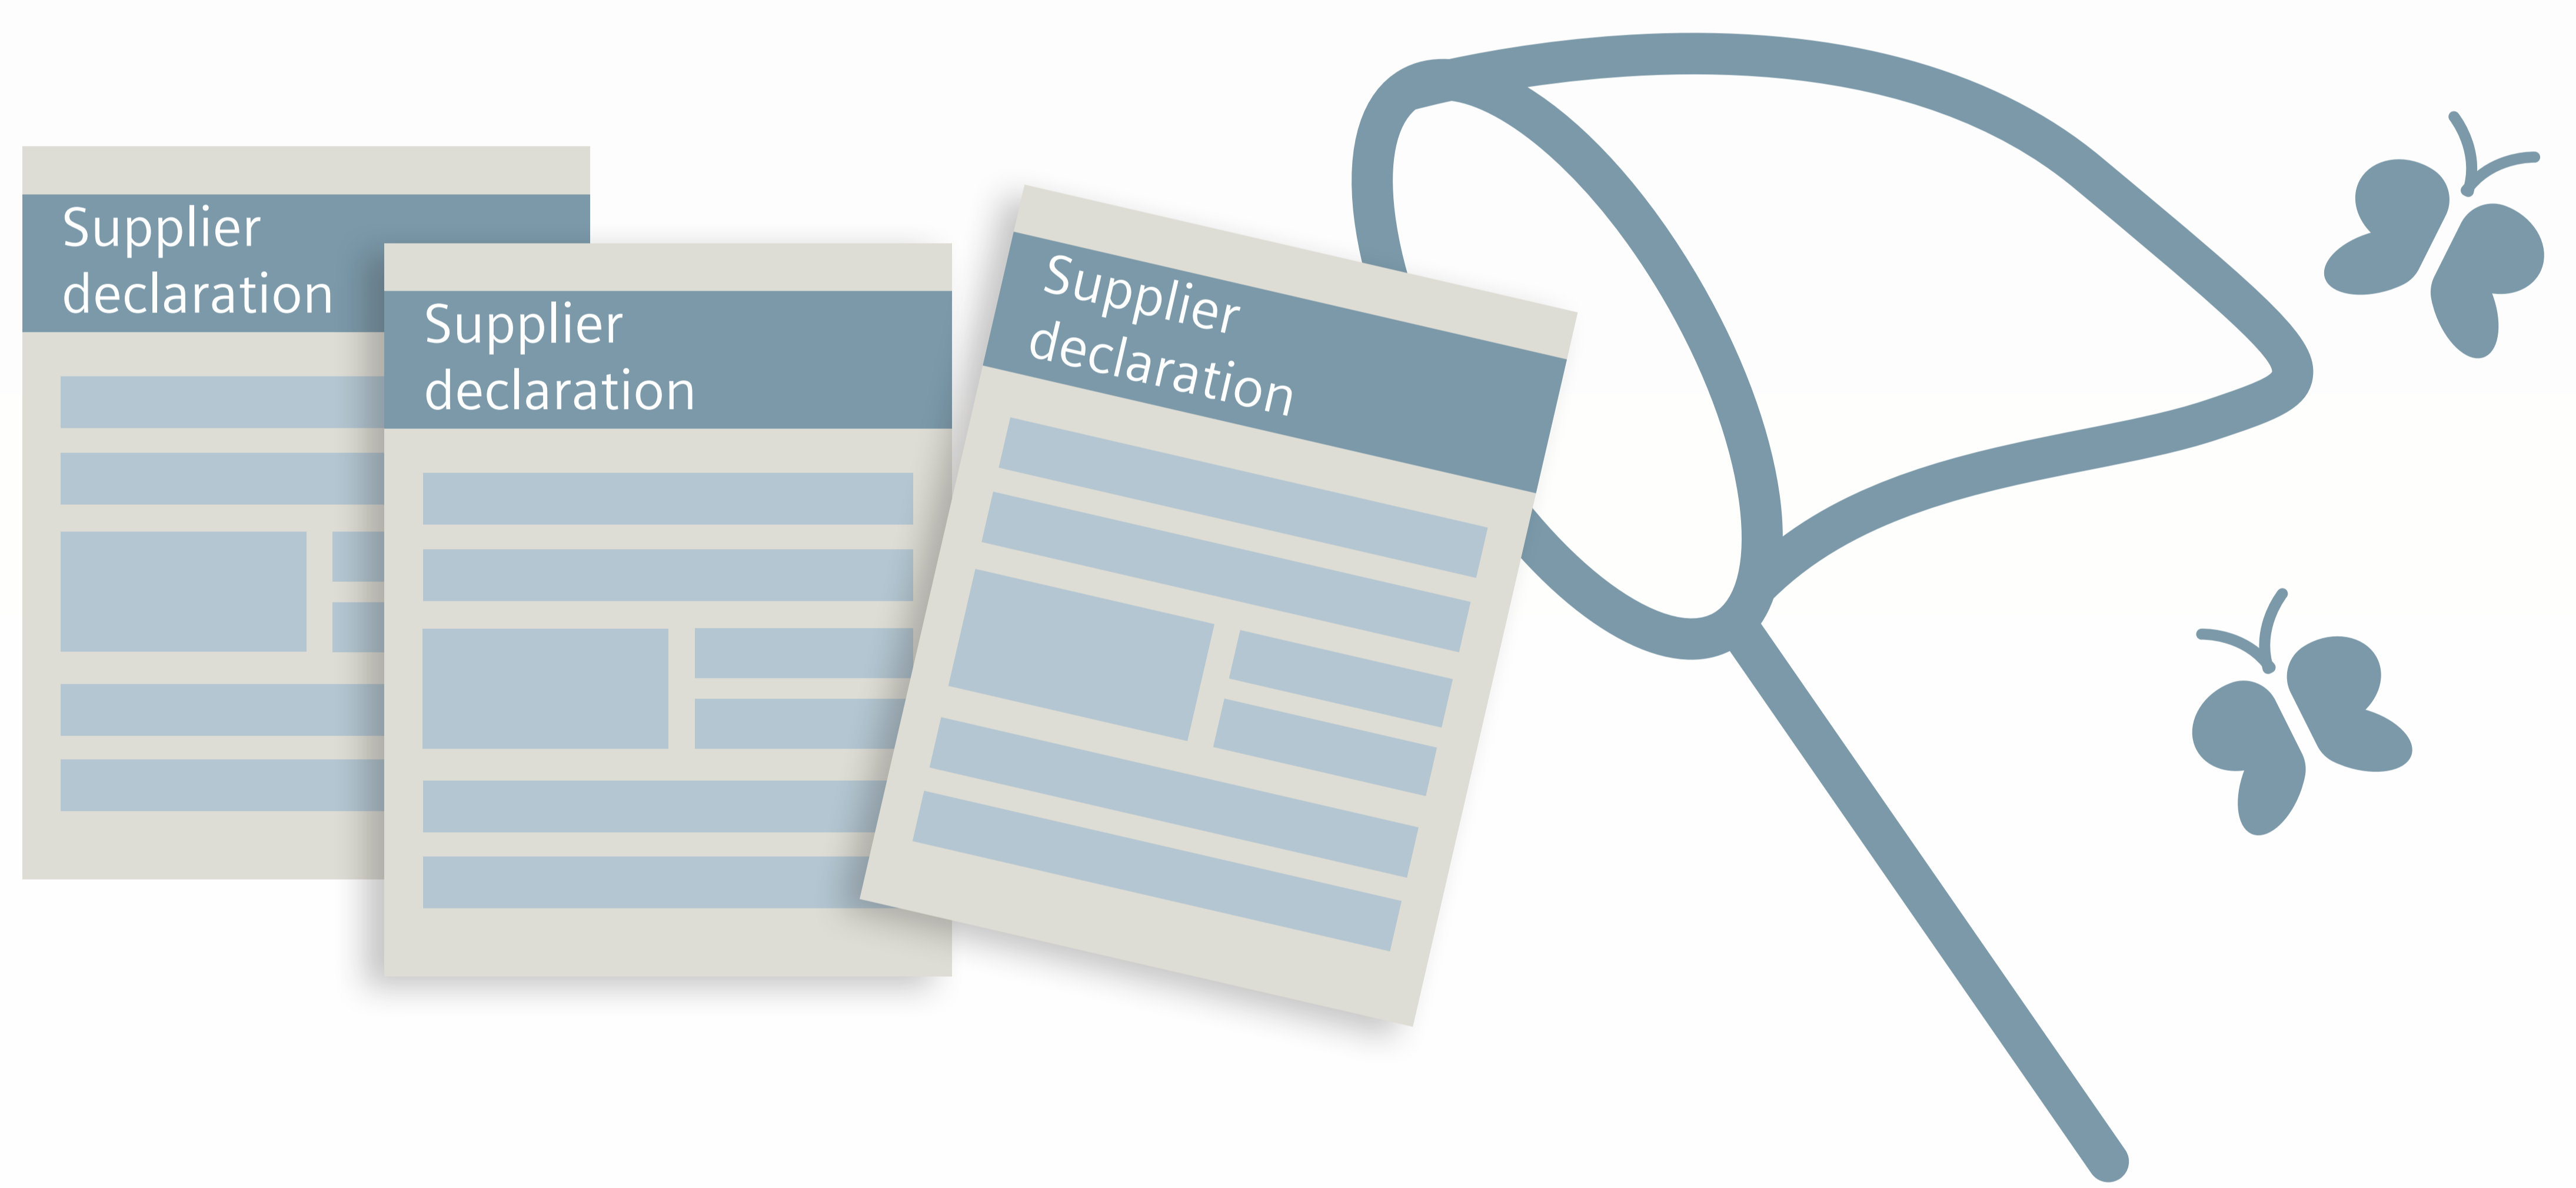

## How to efficiently capture supplier declaration data

Environmental compliance requires complete visibility into your product makeup, including material and substance data from in-house and supplied components.

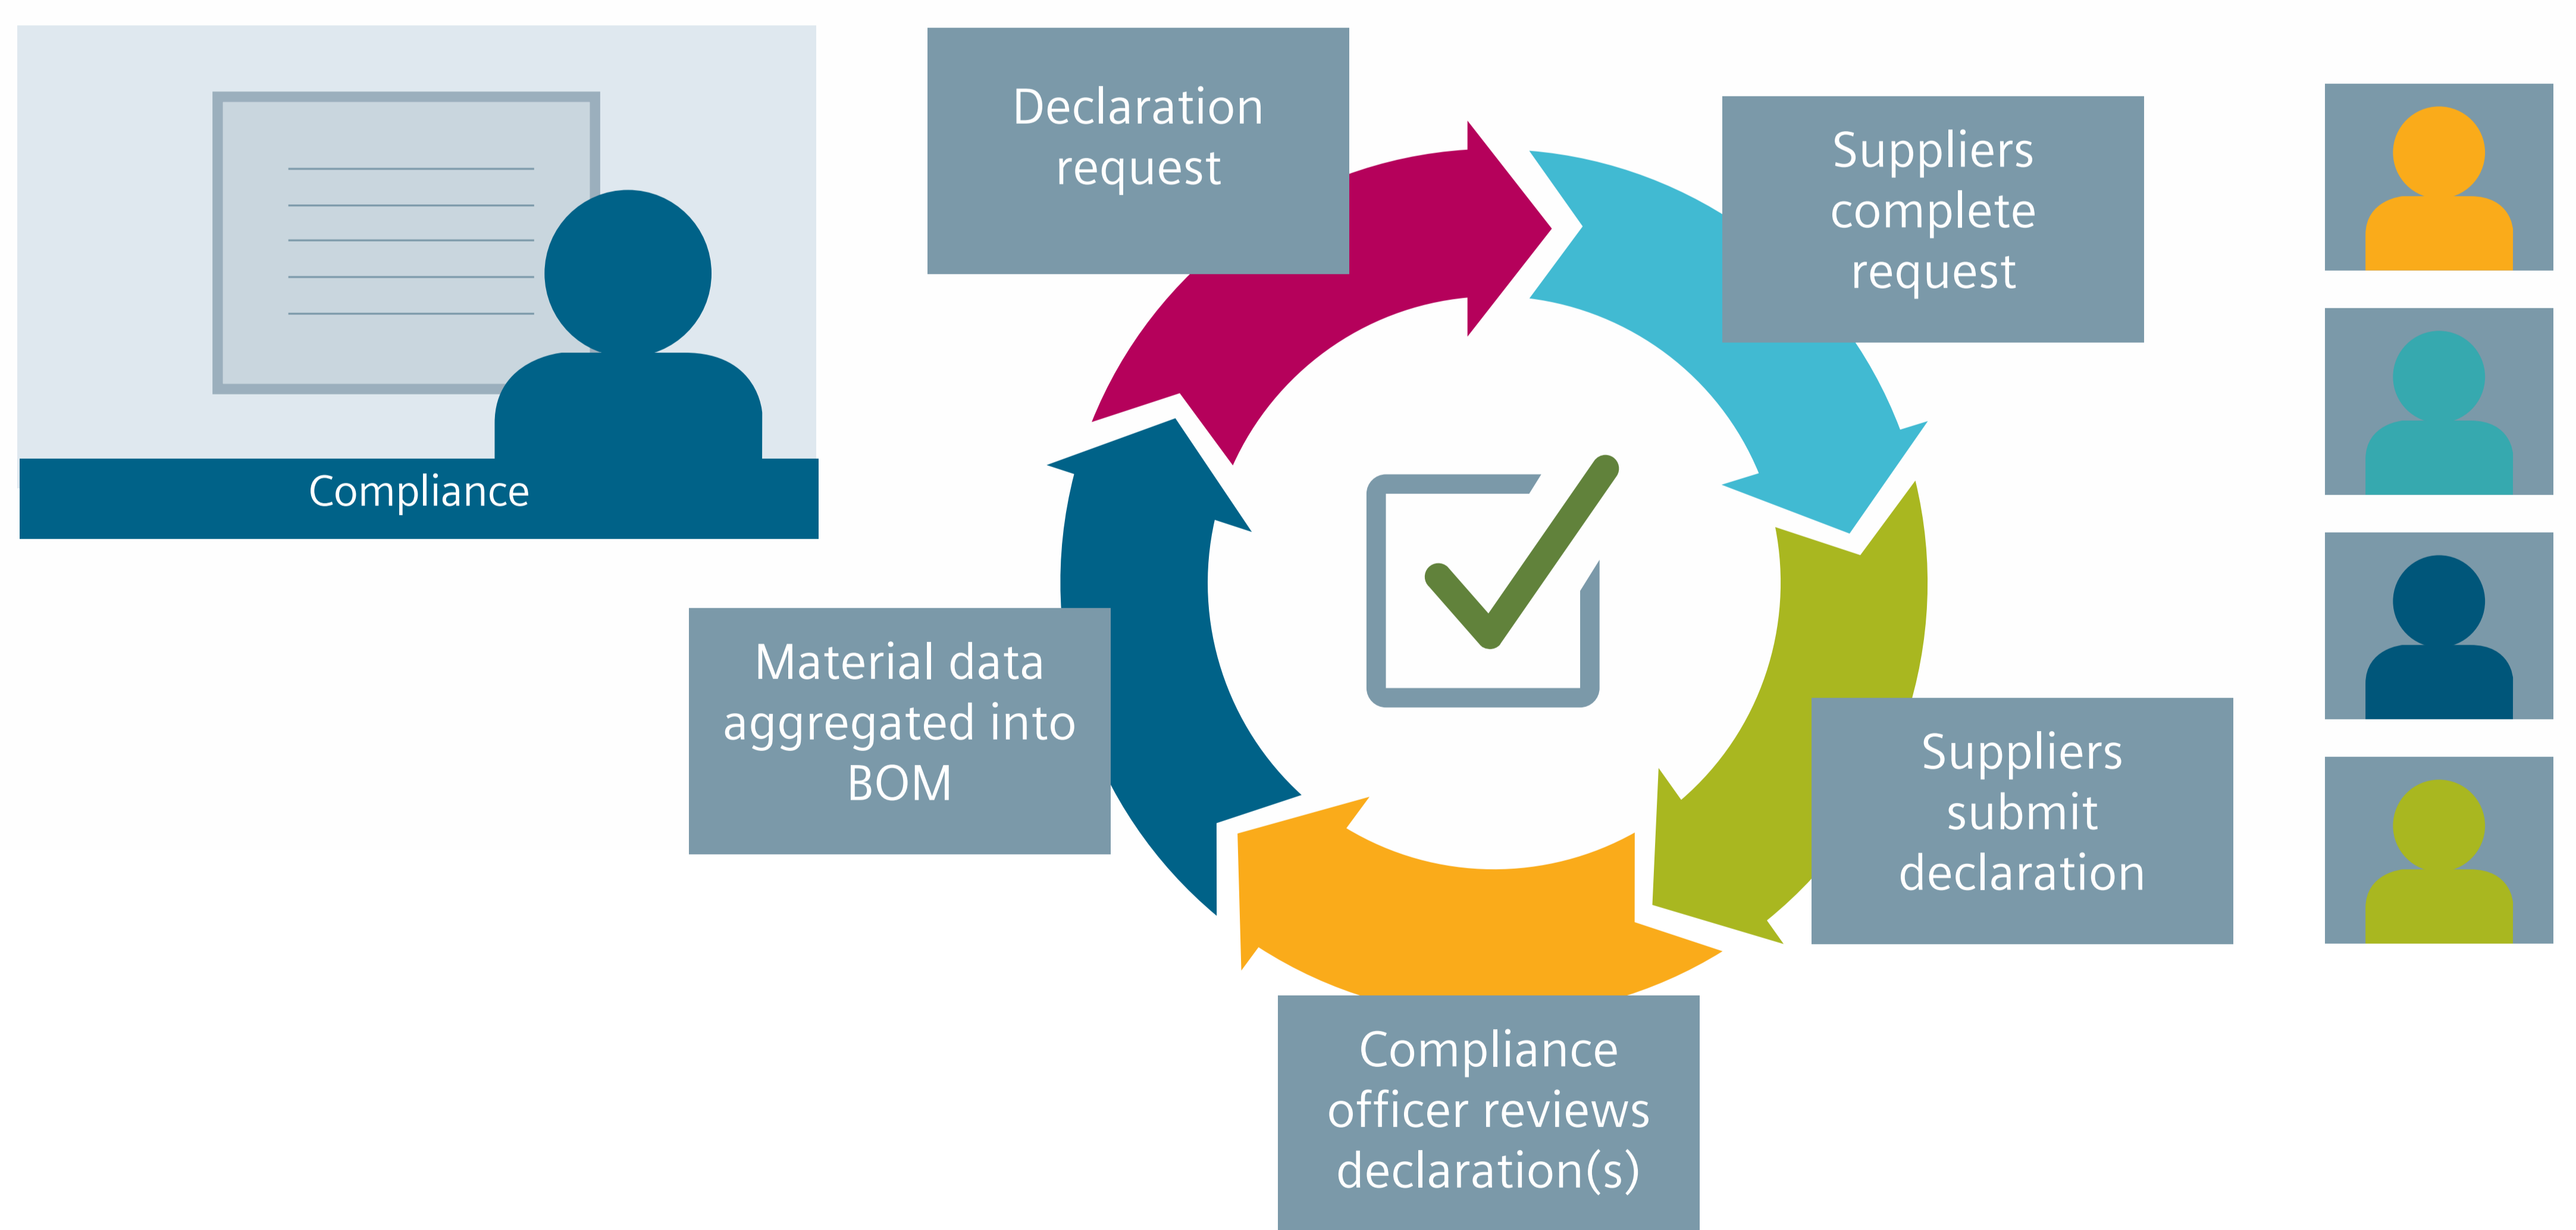

Teamcenter® software can help you efficiently capture accurate and complete supplier declaration data.

- Automates the process of requesting, capturing and validating supplier data to eliminate errors and reduce cycle times
- Supports industry standards such as IPC-175x and CMRT, enabling you to efficiently read in supplier declarations
- Integrates with BOMcheck and IMDS supplier databases to easily gather clean, validated declaration data

With the right technology, you can easily capture and validate supplier declarations and automatically aggregate materials into the product BOM to grade for compliance.

Efficiently address environmental requirements and stay compliant.
