Siemens Digital Industries Software

Use task-specific tools to enhance regulatory compliance

Failing to prioritize quality management

Manufacturers invest in tools to improve efficiency and drive innovation

But many neglect to invest in a suitable quality management system

The most popular tool is spreadsheet software

Spreadsheet software is fine for many tasks, but project management isn't one of them

The risks of managing your quality control process with a spreadsheet

- ❌ Lack of collaboration tools
- ❌ No defined user access
- ❌ Difficult to report on progress
- ❌ Overreliance on meetings

Why you need a purpose-driven quality management system

- ✓ Improve traceability
- ✓ Guarantee data security
- ✓ Eradicate human error
- ✓ Speed up product release

Polarion streamlines project management

- ✓ Tailor the user experience based on each individual's role
- ✓ Provide full transparency into a project with the click of a button
- ✓ Make sure you are viewing the latest version
- ✓ Use automated compliance to pass audits and get to market faster
