Stay current and competitive while boosting the value of your software investment

Benefits

- Increase the value of your software investment
- Access the latest software version
- Receive expert technical support
- Move software licenses from a capital expenditure to an operating expense
- Reduce initial outlay and total cost of ownership
- Enhance certainty of budget planning and cost control and reduce costs of upgrades

Summary

Keeping software up-to-date is one of the main challenges any organization faces. The Siemens Digital Industries Software subscription model offers users many key advantages, including access to the latest software version and the peace of mind of always having access to expert technical support.

The subscription model also makes financial sense. The payment of software licenses can move from a capital expenditure (CAPEX) to an operating expense

(OPEX) and there is the potential for reducing the initial outlay as well as total cost of ownership. A study by McKinsey & Company revealed two of the main reasons for moving to a subscription licensing model: reducing the initial investment by 50 percent and the total property value by 45 percent. According to the McKinsey report, a subscription makes budget planning and cost control more certain and predictable and it can cost less than buying upgrades, no matter how frequently or infrequently you upgrade.

With our subscription software, which is part of the Xcelerator™ portfolio, the comprehensive and integrated portfolio of software and services from Siemens Digital Industries Software, you will have continuous access to all our releases and upgrades. Plus, you'll benefit from expert technical advice from our global support team and network of trusted partners.

Siemens subscription services

On-line, on-the-phone or in person, our support service provides peace of mind to thousands of users worldwide and our support center is available 24/7 for troubleshooting, searching the knowledgebase, accessing documentation and downloading software.

Access the latest technology

Siemens is continuously developing, innovating and improving, and the subscription gives you access to the latest version of our products, providing a constant stream of new features and enhancements.

Use proven technology

The Siemens software subscription gives you access to maintenance updates to your previous releases. Maintenance updates are focused on improving performance and don't otherwise change the ways in which your tools work.

Request fixes and enhancements

Subscription customers receive maintenance updates and can also suggest product enhancement ideas to our product development teams. We work in partnership with our community of users and crowdsourcing ideation is a great way to deliver the enhancements that are most important to you.

Cost savings and budget predictability

Maintaining your Siemens software subscription is more cost effective than upgrading every other year, or every three, four or five years. And because you always have the latest version, costs are predictable.
