

# Introduction Training for MindSphere

## Discover the value of your operational data

### Description

This one-day training provides an introduction to MindSphere – the cloud-based, open IoT operating system from Siemens. The training topics range from the importance of the ecosystem and partner network to connecting sensor data from MindConnect solutions via MindSphere architecture and security solutions to the wide selection of cloud-based business opportunities. A live demonstration presents a collection of sensor data and the subsequent data analytics.

### Objectives

This training enables you to:

- Innovate scalable business solutions by using MindSphere IoT
- Design and create the most suitable business models or technical solutions for your business
- Gain insights from official MindSphere forums

### Content

- MindSphere ecosystem
- MindSphere portfolio
- MindSphere scalability
- Use cases – MindApps
- Use cases – connectivity
- IT security
- Demonstration – live case
- MindSphere pricing model
- MindSphere forums and networks

### Target groups

- Management and sales
- R&D and technical managers

### Training methods

- Interactive lectures
- Demonstration of MindSphere
- Demonstration of connectivity

### Duration

- 1 day
