

MindSphere Consulting

Use MindSphere to unlock the value of your data. Whether that involves tailored connectivity implementation, custom solutions with MindSphere applications, or issue resolution, our MindSphere consultants are here to help.

Description

From OEM customers to end users, our consultants are ready to bring your IoT transformation to life. They can provide both on-site and remote support for your MindSphere solution at a daily basis. Our team will take advantage of the MindSphere organization at large to support your company's digital transformation.

Consulting can start with transferring data from your asset to MindSphere. Let our experts facilitate the connection of all your production assets to MindSphere: Through existing MindConnect devices, your own custom connectivity agents – for example with MindConnect LIB – or expanded protocol support.

Work together with our consultants to identify the most suitable applications for your business among the existing Siemens and partner applications. If these do not suit the needs of your data, our consultants can help you develop your own custom applications that unleash the value of your data.

Objectives

Enable your MindSphere solution with the help of our MindSphere consulting team.
