

Visualization Workshop for MindSphere

Create the user interface and visualization concept for your application for MindSphere

Description

Develop in this workshop a user interface and user experience (UI/UX) concept for your application on MindSphere with our MindServices experts. Map the user behavior to create on this basis the visualization of the planned application. A summarized view of the results from each phase will capture all important information for the next phase of realizing your visual solution.

Our experienced UI/UX experts used their years of combined experience in visual design and front-end development of web applications to evolve the methodology behind these workshops.

Objectives

Obtain the visual and user interface concept for your application on MindSphere.

Content

- Review of the IoT use case including the application requirements
- Define the user interaction workflows together with screen mock-ups
- Define which front-end framework is appropriate
- Define the MindSphere APIs that can support building the solution
- Establish which MindSphere Developer and Operator Resources are required

Target group

Front-end developers responsible for building applications running on MindSphere.

Number of participants

Maximum of eight people, ideally stakeholders from the technical and service departments.

Prerequisites

It is recommended that participants have familiarity with HTML, CSS and JavaScript.

Duration

- 1 day
